PROFESSIONAL SUMMARY

Full-stack developer who builds responsive, user-focused web applications with React, TypeScript and JavaScript on the front end and Python, Django REST Framework, Node.js and Express on the back end. Completed a hands-on software engineering internship at Torilo Academy and has deployed projects spanning a construction and real-estate platform, a fintech prototype, an AI image tool and a recruitment skills assessment. Currently studying for a BSc in Artificial Intelligence. A professional musician whose creative background brings attention to detail, collaboration and adaptability to product work.

TECHNICAL SKILLS

Frontend: React, TypeScript, JavaScript (ES6+), HTML5, CSS3, Vite, responsive web design, component-based architecture, state management

Backend: Python, Django, Django REST Framework, Node.js, Express, RESTful APIs, API integration, asynchronous programming

Databases: PostgreSQL

Mobile: React Native, Expo

Tools & Practices: Git, GitHub, Docker, Postman, Visual Studio Code, npm, Cloudinary, debugging and troubleshooting, version control, software development lifecycle (SDLC), clean code principles

Currently Exploring (foundational): Next.js, MongoDB, AWS, GraphQL

EXPERIENCE

Software Engineering Intern, Torilo Academy

Feb 2026 · Completed

Completed full-stack software development training internship

- Completed intensive, hands-on training in full-stack software development, covering modern web technologies, software engineering principles and real-world project development through practical assignments, coding challenges and project-based learning.
- Built responsive, interactive web applications with HTML5, CSS3, JavaScript and React, using reusable components and modern UI development practices.
- Developed Django back ends with models, views and RESTful APIs, and connected them to front-end interfaces using asynchronous API communication and data handling.
- Built full-stack eCommerce projects with product listings, shopping-cart features and dynamic user interactions, and integrated third-party services and APIs.
- Used Git and GitHub for version control and collaboration, and took part in debugging, testing and performance optimisation to improve reliability and maintainability.
- Applied responsive design principles so applications worked across desktop, tablet and mobile devices.

SELECTED PROJECTS

BRIGHTHOMES Construction Service

Live · in development

Role: Built the React website, Django REST API and Expo mobile app · Stack: React, TypeScript, Vite, Django REST Framework, PostgreSQL, React Native, Expo

- Construction and real-estate services platform built as three independently deployable apps: a website and a mobile app that share one Django REST API.
- Visitors browse services, property listings with galleries and completed projects, book consultations, send enquiries and save items, behind JWT authentication with token refresh.
- Media stored in Cloudinary and data in PostgreSQL, with Django and Vitest test suites.

GrowVault Client project · live demo prototype

Role: Developer on a client engagement that ended before completion, now published as a portfolio prototype · Stack: React, Vite, Django REST Framework, PostgreSQL, JWT

- Savings and investment platform prototype with NGN and USD wallets, fixed-term savings plans, KYC-gated deposits and withdrawals, and an auditable transaction ledger.
- Row-locked wallet balance changes, each paired with a ledger transaction; signature-verified, deduplicated payment webhooks behind a provider-agnostic settlement core.
- JWT authentication with rotating refresh tokens, per-user data isolation and rate limiting. Sandbox payments only: no real money moves.

Live: growvault-nine.vercel.app | Code: github.com/richiejazz/growvault

AI Image Studio Live

Role: Built the Vite frontend and the Express API · Stack: JavaScript, Vite, Node.js, Express, Cloudinary

- Image tool applying Cloudinary AI transformations: format and quality optimisation, background removal, face-detected avatar crops and smart-cropped sizes for major social platforms.
- Cloudinary credentials stay server-side; uploads are processed in memory, validated by their actual file bytes (up to 10 MB) and rate-limited per visitor, with API tests that stub Cloudinary.

Patient Dashboard: Recruitment Skills Assessment Live

Role: Frontend developer, for the Coalition Technologies Frontend Developer skills assessment · Stack: React, Vite, Chart.js, Vercel Functions

- Reproduced the assessment's Tech.Care patient dashboard design in React, including a Chart.js blood-pressure chart, vitals, diagnostic list and lab results.
- A Vercel serverless function proxies the assessment API, keeping its credentials out of the browser and filtering data on the server so the browser only receives what the UI displays.

OneVote Private project · in development

Role: Developer of the voter web app and the Django REST API · Stack: Django REST Framework, React, JWT, PostgreSQL

- Web-based electronic voting MVP designed around Nigerian elections, modelled by state, local government area and polling unit, with a voter web app, candidate portal and administrator API.
- JWT authentication with refresh-token rotation and blacklisting, and role-based access control across voter, candidate and administrator areas. Private repository; not yet publicly available.

CSS Landing Page Frontend practice · live

Responsive landing-page concept built with HTML, CSS and vanilla JavaScript, with a collapsible mobile menu, a swipeable gallery and reduced-motion support.

EDUCATION

BSc Artificial Intelligence, Miva Open University 2026 – In progress

Diploma-level Music Studies, Peter King's College of Music 2018 – 2020

Programme completed; certificate has not yet been collected.

ADDITIONAL

Professional skills: Analytical thinking, communication, team collaboration, adaptability, attention to detail, time management, continuous learning, creative thinking

Music: Saxophone, piano and drums. Performing musician and music teacher (portfolio at richiejazz.com)
